**EARLY DIAGNOSIS
SAVES LIVES**

HPV testing is a **PAINLESS** and **SIMPLE** procedure performed by collecting a swab from the cervix during a gynecological exam.

You should get tested for HPV if;

- you are a smoker,
- you get spotting between periods and/or after sexual intercourse,
- you have persistent, foul-smelling discharge, or
- you have any bleeding in the post-menopausal period.

Even if none of these apply to you, having a uterus means;

It is best to get tested for HPV every 5 years for protection against cervical cancer.

Before you get an HPV test, make sure;

you are not on your period on the day of the test, you have not washed the inside of your vagina or applied any medication, cream, gel, or etc. for at least two days before the test, and

you have not had sexual intercourse for two days before the test.
